

COLLECTING SWEEPER

URBANET G

RABAUD is upgrading its URBANET street sweeper to the URBANET G version, for even greater precision and efficiency.

Known and appreciated for combining manoeuvrability and efficiency, **the URBANET G** is harnessed behind tractors **from 20 horsepower**. Its size, designed for passage in narrow streets and its **sweeping width of 1.50 m or 2 m** depending on the model, make this sweeper the ideal tool for local authorities for the maintenance of city centres and public spaces.

The bin is filled from the top, which allows a **volume of 600 litres of waste** to be stored inside.

The main innovation of this new version is the **integration of a 165 mm diameter collector brush** that increases the gargantuan appetite of the URBANET G. This **patented system** makes it possible to efficiently collect light and bulky waste (gravel, cans, bottles, etc.), as well as to unclog leaves, sand, soil, etc. These residues are then drawn to the central broom which projects them into the collection bin.

The latter is mounted on hydraulic lifting arms, allowing it to be lifted up to 2.10 metres high, to **be emptied directly into a skip.**

Always faithful to its manoeuvrability criteria, this new trailed sweeper retains its adjustable drawbar **and now offers, as an option, a hydraulic hitch that can be de-deployed laterally by 500 mm** (250 mm to the right / 250 mm to the left). Thanks to a cylinder, the machine moves from right to left beyond the tractor gauge, guaranteeing optimal cleaning along kerbs, sidewalks, gutters, cycle paths, etc.

The floating side broom option, allowing you to adapt to harder-to-reach areas without adjustment! An advantage that can be equipped with steel fibres, particularly for mechanical weeding work in municipalities.

Equipped with a mixed polypropylene and polyester central broom, the URBANET G guarantees optimal cleaning without deterioration of markings and coatings. An effective tool both on asphalt and on sports fields with specific surfaces.

The entire sweeper can be hydraulically raised/lowered, allowing you to switch from transport to sweep mode quickly for easy movement from one site to another without having to unhitch it.

Multi-skilled sweeper, the **URBANET G** offers a wide range of options to adapt to all types of sites. Automatic watering on and off, signaling kit, hydraulic unit... so many choices to customize the sweeper to your specific needs.
