

### KINDLING MACHINE

XYLOFLAM 330/450+

#### *RABAUD unveils the new version of its XYLOFLAM 330/450 kindling machine*

RABAUD, expands its range of products for the production of firewood by launching a **new version** of its kindling machine, the **XYLOFLAM 330/450+**, specially designed for professionals.

This machine can process a wide variety of wood, from hardwoods with knots to white woods with a maximum diameter of 45 cm. It also offers the **flexibility to insert logs of 5 different lengths: 15, 20, 25, 30 or 33 cm.**

The operation of the XYLOFLAM 330/450+ is simple and efficient: once the timber has been fed into the inlet chute, it descends by gravity onto a metal belt. They are then directed to a **splitting cross with a power of 16 tons**, which ensures regular splitting, allowing the production of firelighters and logs.

The log section is infinitely adjustable by 20 mm, with simplified pitch adjustment thanks to the "Easydrive" system.

Packaging is done in 20 L or 40 L bags, ensuring optimal storage of the wood.

## Press Release

With a maximum output up to **8 m<sup>3</sup>/h** (depending on the log section and machine adjustment), the XYLOFLAM guarantees high **productivity** to meet the most demanding needs.

Available in three-phase electric versions with a 15 kW engine or in a version with a 22 hp / 16 kW HONDA combustion engine, the XYLOFLAM offers great flexibility of use.

In addition, it is possible to choose for the **XYLOMETER option**, a device that allows the volume of wood produced to be accurately measured, providing additional control over the production process.

With the XYLOFLAM 330/450+, RABAUD continues to offer solutions to meet the varied needs of professionals in the wood industry.
