

POST DRIVER

VIBRESCOPIC 18-40

A new hammer for loader and mini excavator post drivers!

RABAUD completes its range of pile/post drivers with the VIBRESCOPIC 18-40, designed to **fit a variety of loaders, telehandlers or mini-excavators from 1.8 to 4 tons.**

Equipped with a **new percussion hammer**, the VIBRESCOPIC 18-40 offers a very **high strike frequency of 1700 blows per minute**, greatly increasing its effectiveness at work.

In addition, **damping pads** are integrated into the hammer, **reducing noise and vibration**, ensuring optimal operator comfort and preserving the carrier machine.

Thanks to its 50 cm up/down cylinder on an anti-wear slide, the hammer maintains a constant pressure of 500 kg on the stake, guaranteeing **optimal driving in all types of soil.**

The strike cell is automatically triggered on contact with the stake, providing maximum safety.

The 150mm diameter bell is forged, machined and treated, keeping the stake straight and stable **without damaging it**, thanks to its concave design.

Press Release

The offset hammer provides excellent **visibility** of the tool from the cab, allowing the pile to be adjusted or straightened as it is driven.

Optionally, it is possible to add:

- the **hydraulic inclination of +/- 20°** to work plumb even on slopes,
- a pointer for making pre-holes,
- a martyr to drive specific stakes.

It is easy to adapt to the carrier on any brand of loader, telehandler or mini-excavator thanks to a bolted plate on which **RABAUD can install the quick coupler of your choice**. Also, depending on the hydraulic inlets available on the carrier, RABAUD services can provide a 6-way valve as well as an extension cord.
