

HYDRAULIC DEMOLITION GRAB

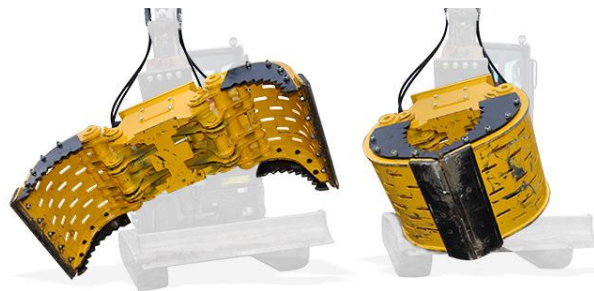

R-GRIP

RABAUD diversifies with a range of R-GRIP sorting grabs!

Available in two models for excavators from 1,5 to 5 tons, the R-GRIP 15/25 and 25/45 sorting grabs diversify the wide range of RABAUD accessories for mini-excavators.

Ideal for rock work, recycling, sorting, and even small-scale demolition, the R-GRIP grab allows you to handle heavy and bulky loads thanks to its **large opening of up to 1215 mm** (810 mm on the small model) and the **synchronized closing of its jaws**.

The models can be chosen as fixed or with a rotator. This device offers **unlimited rotation of the grab**, thus facilitating the handling of loads without requiring maneuvers of the excavator.

Made of **HARDOX steel**, these grabs are ideal for the most demanding tasks. Additionally, the perforated shells are equipped with **two reversible and interchangeable attack blades**, guaranteeing robust and resilient equipment.

Press Release

For greater versatility and to have a tool adapted to all sites, different options can be bolted onto the grabs :

- **Sidewalls** to close the grab like a bucket when handling materials such as soil or sand.
- **Serrated walls** to enhance grip on slippery materials such as logs, branches, or even smooth metal surfaces.
- **Curb grabs** to facilitate the handling of curbs for roadwork or landscaping.

This hydraulic sorting grab is the ideal accessory to enhance your mini-excavator. It offers **versatility** by allowing the handling and recovery of all types of materials (wood, scrap metal, sheet metal, rocks, etc.).
