

HIGH-PRESSURE CLEANER

NHP 600

A PTO-driven high-pressure cleaner!

RABAUD has extended its range of maintenance equipment with a **high-pressure cleaner that can be fitted to the tractor's 3-point linkage**. Driven by the tractor's power take-off, the **NHP 600** operates without an electrical connection or internal combustion engine.

Equipped **with a 600-litre water tank**, the NHP 600 can work autonomously, even when there's no water nearby. Its **15 l/min high-pressure pump** delivers cleaning power to suit all situations, while guaranteeing low water consumption.

The power transmitted by the tractor's power take-off (PTO) maintains a **constant speed at full load**. This ensures that the high-pressure pump operates at 100% efficiency.

Its lance with rotabuse is ideal for **cleaning public spaces** (roads, street furniture, signs, graffiti removal, etc.) or for removing accumulated mud, as well as for cleaning **buildings** and **vehicles**. This long lance prevents the operator from bending over when working on the ground.

To maximise ease of use, a reel with a **20-metre hose** makes it easy to work and get as close as possible to cleaning areas. **The hose rewinds automatically.**

The 600-litre polyethylene water tank is designed to withstand the elements and resist corrosion. Its wide opening makes it easy to fill and maintain.

An easily accessible filter protects the high-pressure cleaner pump from impurities.

To meet specific needs, the NHP 600 can be fitted with a number of **options: a watering kit** for green areas, and a **detergent**, degreaser or anti-foam **suction kit** with dosing.

The whole unit is mounted on a sturdy steel subframe with **4 swivel wheels with brakes**, making it easy to move around inside buildings for optimum storage, and to attach to the tractor.

The tank, pump and entire water circuit **are fitted with drains**, allowing the washer to be drained and winterised in complete safety during periods of extreme cold.
