

ALIGNING COLLECTING SWEEPER

SUPERCHAMPION

RABAUD a hydraulic collecting box option to its SUPERCHAMPION sweeper!

The **SUPERCHAMPION** 3-point rear-mounted **sweeper** is ideal for sweeping farmyards and livestock buildings, as well as roads and public works sites.

At the *SOMMET DE L'ELEVAGE 2024 TRADE FAIR*, RABAUD will be unveiling a new model on its stand: the SUPERCHAMPION 2400, a 2.40 m wide model **equipped with a hydraulic collecting box**. With a useful capacity of 200 litres (for a total volume of **330 litres**), this bin can collect a large volume of waste.

Thanks to its hydraulic cylinder, hopper can be opened easily from the cab via a distributor or radio remote control. The emptying system has been simplified, making it possible to switch quickly from an aligning function to a picking function, increasing its versatility.

Its mixed-fibre or polyester broom is just as suited to delicate surfaces as it is to asphalt or concrete.

The SUPERCHAMPION retains its mechanical offset and orientation system (hydraulic as an option), enabling waste to be directed to the right or left and swept beyond the tractor's clearance gauge.

It also has a host of other options, including a sprinkler system and a side brush, so it can be adapted to suit any site!
