

WOOD CHIPPER

VEGETOR 200

A new road-mounted branch shredder for even greater productivity power and versatility!

RABAUD is launching the **VEGETOR 200 M**, a wood chipper that enhances the performance and capacity of the range on road chassis. This model can shred branches up to 200 mm in diameter, surpassing the 160 mm of the VEGETOR 160 M-42.

Designed for green space professionals, local authorities and hirers, this road-mounted shredder is powered by a **DOOSAN Stage V 60 hp engine**, renowned for its reliability, advanced technology and environmental compliance, since it is compatible with HVO 100 biofuel. **A powerful yet quiet engine**, due in part to its absence of vibrations.

The shredder has a torque reserve to provide extra power when needed, without reducing speed or running the risk of stalling. This is a major advantage when shredding large branches or very hard wood. By adjusting power in this way, the shredder revs up more quickly if the Nostress is triggered.

The **NOSTRESS system** features three presettings: ECO/STANDARD/MAXI, adapted to different types of work. This system enables the rotor to regulate itself automatically when heavy timber passes through, without stalling the machine, guaranteeing an **estimated output of 5,000 kg (15 MAP) per hour**.

Like its counterparts, this thermal branch shredder has a **"5in1rotor"** can choose the shredding method they prefer:

- a mode consisting of **2 knives**
- a mode consisting of **2 rows of 11 flails**
- a mode consisting of **knives+ flails**.

Two other modes are available as options : **1 knife** or **4 rows of flails**.

A **very large hopper** and a **convergent pitch feed roller** that centres the branches for optimum passage through the rotor make it easy to process large volumes of vegetation or branches with forks. As standard, a **400 mm wide conveyor belt** conveys the wood to the rotor, improving operator comfort.

To comply with the new regulations, the **electrical circuit has been completely redesigned, with a new PLC** fitted with watertight screw-in sockets on all connections. This makes the machine's electrical system extremely reliable and long-lasting.

With its **130 km/h road-approved chassis and folding chute and hopper**, this wood chipper is easy to transport and be used on all kinds of sites, woodland to private gardens. Weighing in at more than 750 kg, it requires a **BE licence**.

For even greater versatility, the VEGETOR 200 M offers a host of options, including a rotating beacon, triflash triangle, tool holders with handle or chainsaw, tool box... for a **"made-to-measure" package** tailored to your needs.
