

LEAF VACUUM

WINDY 286 RL

RABAUD expands its range of WINDY leaf vacuums with a small, efficient, and compact model designed for tipping trailer trucks !

With the **new WINDY 286 RL leaf vacuum**, RABAUD enhances its offer to better meet the needs of municipalities and green space professionals. Smaller in size, it is the ideal compromise in terms of quality-price ratio for maintaining small and medium-sized sites.

Weighing no more than 60 kg, it can be manually set up by two people on the hinged or tilting sideboard of a small dump truck using two ergonomic handles.

Its **adaptation to the sideboard** facilitates the evacuation of leaves directly into the truck bed. An adjustable cap at the end of the chute allows the flow to be directed homogeneously into the bed.

An **optional net kit for the bed** can be added, allowing the waste to be confined in the trailer and thus increasing its loading capacity.

This leaf vacuum is powered by a **5.8 hp HONDA petrol engine**, which comes with a 3-year warranty.

Like the WINDY 491 RE, it is equipped with a suction hose with a handle and ground wheel. An ergonomic design that makes handling easier and thus reduces operator fatigue.

To avoid clogging, the hose is offset from the turbine. The turbine, equipped with four removable blades and a large-diameter volute, offers greater airflow for better suction and effective cleaning of wet leaves.

The **lifetime-lubricated** bearing requires no additional maintenance.

The WINDY 286 RL is the ideal solution to prevent the accumulation of dead leaves in autumn and the risks of clogging drains or creating hazards on roads.

Thanks to its optimized design, it allows for efficient, effortless work!
