Press Release

# SWEEPER ON MASS CARRIER FRONTNET

***RABAUD has expanded its range of road maintenance equipment with the new FRONTNET 1500 A sweeper and aligner. Designed to be fitted directly onto the front weight carrier of micro-tractors ranging from 15 to 50 ch.***

## A compact and versatile sweeper

With a **working width of 1.50 m**, the FRONTNET effectively sweeps and aligns leaves, gravel and other debris on roads.
Its 5-position manual **steering** system, ranging from **-22° to +22°**, makes it easy to adjust the sweeping direction to push debris to the side. Hydraulic steering is also available as an option for greater ease of use.
The sweeper also features a **±10° oscillation**, enabling it to follow the unevenness of the road surface and negotiate changes in level.

## A robust design for efficient sweeping

The FRONTNET is fitted with a **400 mm diameter** brush, bristled with long polyester fibres to ensure good wear resistance and a long service life.
Its metal hub and reinforced chassis ensure it is highly robust, making it suitable for regular use by local authorities and professionals responsible for maintaining public spaces.
An **automatic brush pressure adjustment** system allows the contact with the ground to be adjusted for efficient sweeping, without the need for gauge wheels.

## Simple and practical to use

**Mounted directly onto the** front **weight carrier** of the micro-tractor, the FRONTNET is powered by the tractor's hydraulic system, requiring a flow rate of between 20 and 40 l/min.
Its **hydraulic lift mechanism** makes it easy to move it into the transport position, whilst its parking stands allow the equipment to be set down and stored easily when not in use.

**With the FRONTNET 1500 A, RABAUD offers a simple, robust and functional sweeping solution, perfectly suited to the day-to-day maintenance needs of local roads.**
