Press Release

HYDRAULIC CUTTING DISC R-CUT 600

RABAUD is expanding its range of mini-excavator attachments with the R-CUT 600 hydraulic pruning disc. Designed for pruning and vegetation maintenance work, this attachment enables branches up to 20 cm in diameter to be cut with precision and safety.

A clean, precise cut, up to 20 cm in diameter

Suitable for **mini-excavators up to 5 tonnes**, the *R-CUT 600* is fitted with a 600 mm diameter blade made of carbide steel with alternating teeth. This design allows the cut to be initiated with minimal power, whilst ensuring a clean and efficient cut.

With a rotation speed of 1,400 rpm, it enables rapid work on branches and vegetation **up to 200 mm in diameter.**

Its low-overhang disc makes it easy to work close to tree trunks, whilst its mast-mounted design with an offset disc provides the operator with excellent visibility from the cab.

A versatile and easily adaptable piece of equipment

Thanks to its low hydraulic requirements, the *R-CUT 600* is compatible with a wide range of mini-excavators. **Three hydraulic motor displacements are available** (16, 25 or 36 cm^3), with a required flow rate of between 22 and 45 l/min depending on the configuration.

To adapt to different site conditions, a mechanically **swivelling attachment** is available as an option. This allows the tool to be positioned to the right, left or in line with the excavator, thus offering greater flexibility during cutting operations.

A robust and safe design

Designed for demanding tasks, the *R-CUT 600* features a dual-belt drive system, which protects the hydraulic motor should the blade become jammed.
The hydraulic hoses are integrated and protected to minimise the risk of them becoming snagged in branches and to ensure their longevity.
Weighing just 90 kg without the quick-coupler, this new attachment combines compactness, robustness and ease of use.

RABAUD also supplies the quick-coupler adapted to the user's mini-excavator model, ensuring perfect compatibility with the carrier machine.
